

Askari Safari

Photography Masterclass

Askari is proud to offer a photographic adventure for those who wish to 'develop' (no pun intended) their skills as a photographer under the expert guidance of a world class professional instructor and one of Africa's top safari guides.

This adventure whilst centered on wildlife photography will also encompass the heart of Africa, our diverse people and magical scenery.

Under perfect conditions, bright blue skies, spectacular sunrises and sunsets, learn from two experts, one a full time professional who is a world renowned photographic instructor and the other a top African guide, who will teach you all about learning to read wildlife, their subtle tell tail signs that give you those vital seconds to prepare for the upcoming action shot.

This safari caters for all levels of photographers, the key is you will have plenty of time with the two instructors to help you up your game.

The safari starts at one of the World's Seven Natural Wonders, the Victoria Falls. We will visit the Falls twice during our four day stay, catching the Falls in early morning and late evening is like visiting two different places. We will also spend time visiting local markets, schools, art galleries, going on sunset river cruises, bird photography tours along the river and even visiting a wildlife rehabilitation center. During the evenings we will catch some cultural shows where you can start to hone your low light photography at the same time as dinning on some excellent cuisine.

The pace slows down when on the fourth day we travel down to Hwange National Park, stopping at culturally enriching attractions along the way. The plan for the day is to split into two groups, which we will alternate mornings and evenings, one with the Instructor, one with the Guide. Those with the instructor will spend quality time, going over all the key elements to taking stunning shots, the guide will educate

you on wildlife traits, characteristics and behaviors so you can set up and anticipate wildlife movements well in advance. Each lunchtime we will return to camp and the guide will go through the mornings shots, helping people understand the basics of developing the shot using various programs such as Lightroom. The afternoons are usually spent at or near waterholes, taking shots at unique angles and preparing for the all-important sunset shot. After a delicious dinner we will rig up a screen and review each other's work. Some evenings we will go out on game drives and try night photography or work on our star photography. The African sky is a magical chance to view the Southern Constellations, free of any ambient light or pollution.

During the safari we will visit two different camps that showcase two very different topographies, working on our scenic shots from hill ranges, to forests, to savannas and all that they encompass.

For the 12 night adventure, all-inclusive the cost is \$9,900 per person sharing. The cost does not include the price of airfare to and from Victoria Falls.
